## EXECUTIVE SUMMARY

In preparation for the elimination of cash bail beginning in January 2023, the Illinois Supreme Court Pretrial Practices Implementation Task Force set out to measure the financial impact this policy change will have on counties throughout the State of Illinois, as well as circuit court clerks who will no longer retain up to 10% of bond deposits as bond processing fees. In a first-of-its-kind comprehensive analysis, this report provides information about bond payments collected and disbursed in criminal cases based on data from 95 of the 102 counties in Illinois. The primary purpose of the analysis was to identify how much money counties across Illinois collect and process annually in bond payments, and how circuit court clerks distribute those bond amounts. The report focuses on the amount of bond payments applied, which are payments processed and disbursed at the conclusion of a criminal case, as opposed to bond payments collected at the time of pretrial release. Bond payments are applied to a variety of purposes at the conclusion of a criminal case, including fines, fees, assessments, court costs, restitution, and refunds to the person who paid the bond.

Here are the key findings from the analysis:

- Across the 95 Illinois counties that provided data, bond payments processed and disbursed in criminal cases totaled \$153.2 million in 2016. This amount decreased to \$121.9 million in 2020;
- On average over the five-year period, the dollar amount of bonds processed in Cook County represented approximately 40% of the statewide total;
- The majority of total bond disbursements—70%—were applied to satisfy court-ordered fees; 10% were applied to satisfy fines and restitution payments; and the remaining 20% were refunded to the person who paid the bond or paid to private attorneys that represented the defendant;
- Clerks of circuit courts collected a total of \$14.9 million in bond processing fees in 2016, which decreased to \$4.8 million in 2020. On average over this period, bond processing fees represented 8% of total bonds applied. These bond processing fees will be eliminated with the abolition of cash bail;
- Other fines and fees will not be eliminated with the abolition of cash bail, but judges may no longer order bond payments for pretrial release, which means these bond payments will no longer be used to satisfy the payment of fees and fines;
- Of the total fees applied from bond payments over the five-year period from 2016 to 2020 among 88 counties for which detailed data were available, an average of 58% of bond payments were distributed to satisfy county-specific fees; the remaining 42% were directed to other state or municipal fees imposed on the defendant.

Please refer to the Methodology and Data Limitations sections of the report for details about the information included in the analysis and the limitations and challenges with data received. The figures presented in this report should be considered estimates, meant to help inform criminal justice system stakeholders as Illinois moves toward a new pretrial release system.

## INTRODUCTION

In each of Illinois' 102 counties, circuit court clerk offices collect and manage the payments of fines, fees, assessments and court costs across all circuit court divisions and distribute those moneys for a variety of local and state purposes. A significant portion of these fees and fines, including from bail bond payments in criminal cases, are used to fund the offices of the circuit court clerks and other county-level court services.

In criminal cases, it is common for a judge to set a cash bail at a criminal defendant's initial appearance before the court, which the person then must pay in order to secure their release from jail while the case is pending. After a defendant or someone on the defendant's behalf pays the deposit for release, the payment is held until the conclusion of the criminal case. In the event of a conviction, the court may order a number of fines, fees and assessments to be paid, which are often deducted from the bond payment. After all court obligations have been met, clerks of courts are authorized by statute to retain 10% of the deposited bond amount as bail bond costs, and return 90% (725 ILCS 5/110-7). One exception is that in Cook County, the court clerk may only retain up to \$100 of each bond deposited as bail bond costs. These bond deposit amounts retained by circuit court clerks will be referred to as *bond processing fees* in this analysis. After fines and fees are applied from the bond payments, the remaining amount is refunded back to the person who paid the bond.

With the passage of Illinois' criminal justice reform law, Public Act 101-0652 (known as the [SAFE-T Act](#)), the use of cash bail will be eliminated beginning January 1, 2023. This means judges may no longer order upfront payment of bond in order for criminal defendants to achieve pretrial release. In preparation for this significant change in practice, the Illinois Supreme Court Pretrial Practices Implementation Task Force set out to measure what financial impact this change will have on counties, and specifically on circuit court clerks who will no longer retain up to 10% of bond deposits for bond processing fees.

The SAFE-T Act *does not* alter the ability for other fees, fines, and assessments to be imposed on those convicted of crimes in Illinois. However, as a result of the SAFE-T Act's abolition of cash bail, in addition to the revenue generated from bond processing fees being eliminated, the ability to pay off imposed fees, fines, and assessments with money that had been posted for bail will end. Because of this, it will be important to consider and monitor the potential impact this change may have, such as delayed payment to private attorneys or violations of probation/extended probation terms stemming from non-payment of fines, fees or restitution. There will also need to be consideration of what government functions were financially supported with the bond processing fees, and what other sources of revenue can be used to support these activities.

The Civic Federation assisted the Administrative Office of the Illinois Courts (AOIC) and the Pretrial Practices Implementation Task Force with conducting this analysis. The primary purpose of the analysis was to identify how much money counties across Illinois collect and process annually in bond payments, and how circuit court clerks distribute those bond amounts. We hope the information presented in this report will be informative to all criminal justice stakeholders as Illinois moves toward landmark pretrial reforms and the elimination of cash bail.

The findings presented in this report may lead to further questions for consideration:

- What are the implications of fee and fine collection without having upfront bond payments from which to deduct these fees and fines?

- How much potential revenue from the bond processing fees will be lost to counties? Should this lost revenue at the county level be compensated by the State of Illinois?

*We would like to offer special thanks to Katie Blakeman, Senior Data and Innovation Manager at the Administrative Office of the Illinois Courts, for her assistance with this project and with obtaining the data needed to conduct the analysis.*

## METHODOLOGY

The data presented in this analysis were obtained either directly from the offices of circuit court clerks or from their case management system vendors. **We received complete or partial data from 95 of the 102 counties in Illinois (93%).** Data for 77 counties were provided in one complete data set from Goodin Associates, the company that provides the court case management software known as PC Jims in 77 counties. Data for 7 additional counties were provided by JANO Technologies, the vendor for the JANO case management system used in those 7 counties. Finally, data for an additional 11 counties were provided directly from the offices of circuit court clerks.

The AOIC asked each circuit clerk to provide a data set with annual data for the five years from 2016 through 2020, including:

- Total cash bond payments collected per year for all criminal cases (felony, misdemeanor and DUI);
- Total cash bond payments processed per year for all criminal cases (felony, misdemeanor and DUI),<sup>1</sup> and of those processed:
  - Amount collected by the circuit court clerk for 10% bond processing fees;
  - Other fee amounts distributed to the circuit clerk;
  - Amount applied to satisfy other court fees and assessments;
  - Amount applied to fines;
  - Amount applied to restitution;
  - Amount applied as payments to attorneys (if available); and
  - Amount refunded to the defendant or the person who paid the bond on the defendant's behalf.

The AOIC provided a template with the categories listed above for circuit clerks to use for submitting their data. In many cases it was easier for circuit clerks or their case management system vendors to produce a more detailed dataset with amounts applied from bond payments across every individual fee or journal classification, rather than aggregating the information to fit within the categories in the suggested template. We received these more detailed data sets for 88 counties, which allowed for further analysis of the financial impact to both the offices of circuit clerks as well as other county-level functions. Seven counties provided data in the requested template format, which did not allow for as detailed breakdowns of financial impact to counties. However, it did provide useful information about the financial impact to circuit court clerks specifically, as the project originally intended.

**We were unable to obtain data from seven counties:** Kankakee, Knox, Fulton, Lee, McDonough, Hancock and Henderson. Therefore, the numbers presented in this analysis exclude these counties. Of those seven counties, Kankakee is the largest county, with a

---

<sup>1</sup> Note: because the analysis covers only criminal cases (felonies, misdemeanors and DUIs), the analysis excludes any quasi-criminal or traffic cases in which a bond payment was required for pretrial release.

population of 109,862. The other six counties are smaller counties with populations under 50,000.

## DATA LIMITATIONS AND NOTES

There were several challenges with the data provided for this analysis, including:

- Differences in the way circuit clerks classify their data, and the complexity of reconciling those differences, which limited the ability to compare data across counties. For example, the number of categories used to classify the disbursement of bond funds in each county varied significantly, ranging from 72 to 155 individual fees, assessments and fines;
- Differences in the way the data categories were interpreted by those providing the information, which required reconciling differences in the way data were provided;
- Potential data entry errors and misclassifications upon entry in case management systems;
- Limitations in being able to make accurate estimates of circuit clerks' revenue from bond processing fees due to changes in the way bond processing fees were recorded in the 77 counties using PC Jims software before and after implementation of the Criminal and Traffic Assessment Act;
- Some discrepancies in amounts reported across the five-year period within the same county, which indicate that some counties made changes to the way fees and assessments were classified and recorded over time; and
- Inconsistencies in the way data were provided and missing data categories from some counties. Missing categories of data from some counties resulted in an incomplete aggregate data set and made it more difficult to make across-the-board summaries and comparisons. These limitations due to missing categories of information are described in detail below.

*For these reasons, the dollar amounts presented in this analysis should be considered **estimates**, with potential room for error.*

Two legislative policy changes took place over the five-year period (2016-2020) examined in this analysis. First, the Bail Reform Act of 2017 (Public Act 100-0001), which went into effect on January 1, 2018, made changes to Illinois bail law. It recommended the use of non-monetary pretrial release and ordered that any monetary bonds imposed be “not oppressive and considerate of the financial ability of the accused.” It also created two categories of criminal offenses—Category A and Category B.<sup>2</sup> The law requires a person in custody for a Category B offense due to an inability to post monetary bond to be brought before the court within seven days for a rehearing on the conditions of bail and pretrial release. It also requires that the monetary bail amount be reduced by \$30 for each day a person is held in jail on a Category B offense.

---

<sup>2</sup> Category A offenses include Class X, Class 1, and Class 2 felonies as well as some Class 3 and 4 felonies as specifically outlined in the statute. Category B offenses include business offenses, petty offenses, Class A, B, and C misdemeanors, and some nonviolent Class 3 and 4 felonies (primarily retail theft and drug possession). The full definitions can be found in 725 ILCS 5/102-7.1 and 725 ILCS 5/102-7.2.

Second, the passage of the Criminal and Traffic Assessment Act (CTAA) (705 ILCS 135), which went into effect on July 1, 2019, led to changes in the way criminal fees and fines are set. It streamlined schedules for fines and fees in order to standardize amounts charged throughout the state. It also led to changes in the way many circuit court clerks capture information. In conducting this analysis, we found that in several counties there were significant changes in the fields used to categorize dollar amounts in 2019 and 2020 compared to prior years. In some cases, counties started using new categories, and in some cases, there were large shifts from category to category.

Further analysis will be necessary to identify the effects of these policy changes over time.

One of the main objectives of this project was to identify how much revenue circuit clerks retain from bond processing fees. However, this was complicated by the fact that the data for the 77 counties received from Goodin Associates did not include a separate field to capture the 10% bond processing fees. In each of these counties, a general “Clerk” field is used to capture the clerk’s bond fees as well as other fees. Following implementation of the CTAA in July 2019, however, this “Clerk” field primarily captures bond processing fees. Because the CTAA went into effect mid-way through 2019, an estimate of bond processing fees retained by the clerks in each of these counties is only fully available for 2020. Therefore, 2020 is the only year for which we have a precise measure of bond processing fees retained by circuit clerks, interpretation of which is complicated due to the impact COVID-19 had on arrests and bond court operations. The estimated difference between the bond processing fees and other dollar amounts counted along with bond processing fees in these 77 counties is 14%. Put differently, about 14% of the dollar amounts that would have been counted with bond processing fees as in previous years were moved to another category in 2019 and 2020 (8.4% in 2019 and 22.7% in 2020). When combined with the data across all 95 counties, though, this difference is only about 4%.

While 2020 is the year that most accurately reflects bond allocations post-CTAA, 2020 is not a representative year due to the many disruptions caused by the COVID-19 pandemic. A combination of court closures and case delays, combined with a reduction in crime and arrests, likely led to a much lower volume of processed cases and therefore fewer court fees and fines processed compared to prior years.

### **Specific Data Limitations by County**

Some counties were unable to provide data within each category requested. Therefore, the aggregate data set used to produce this analysis is in some cases missing certain categories or certain years of data within specific counties.

**Notes on Cook County:** The source for bond data used for this report is based on criminal case information in the Cook County Odyssey case management system provided by the Office of the Clerk of the Circuit Court, with the assistance of Tyler Technologies.

**Missing Categories:** Cook County was unable to provide bond amounts applied to restitution and bond amounts refunded (with the exception of one year of data for refunded amounts). Therefore, bond payments applied to restitution and bond amounts refunded are excluded for Cook County.

**Cook County Bond Refunds:** Due to a transition in case management systems, bond payments refunded were only available for 2020 (again, not necessarily a representative

year due to the impact of COVID-19). In 2020, \$2.9 million in bond payments were refunded, compared to \$55 million in bond payments applied to satisfy fines, fees and assessments and clerks' fees. This represents 5% of bond payments refunded back to the person who paid the bond. These numbers are not included in the findings because of the single year of data.

**Cook County Case Volumes:** Cook County is significantly larger than the other 101 counties and has much higher case volumes than other counties. Criminal cases filed in Cook County in 2019 (a total of 133,659 compared to 138,998 in all other counties) accounted for 49% of total criminal case filings statewide. While important to the statewide analysis, Cook County's case volumes skew the data significantly. The findings of the analysis highlight the differences between Cook County's bond figures compared to the rest of the state when possible.

**Note on Kane County:** Kane County provided data for 2017 through 2020, but not 2016. Therefore, the aggregate numbers presented throughout the analysis for 2016 exclude Kane County.

**Note on Lake County:** Lake County did not provide the bond amounts applied to restitution or amounts refunded.

**Note on St. Clair County:** St. Clair County was unable to provide a breakdown of the bond amounts applied to fees and fines, so those two categories are combined into a single category—bond amounts applied to fees and assessments.

**Note on Tazewell County:** Tazewell County was only able to provide limited information for two years of data—2019 and 2020. Numbers for 2016 through 2018 were not available and are therefore missing from the analysis. The numbers provided for 2019 and 2020 include amounts for total bond collected, total bond applied, the clerk's 10% bond processing fee, and bond amounts refunded. The Tazewell County numbers do not provide detailed breakdown of bond payments applied toward fees/assessments or fines, and therefore exclude bond amounts applied to fines, fees or restitution.

**Note on Vermilion County:** The numbers provided by Vermilion County do not include all five years of data within certain categories. Numbers were not provided for 2016 through 2018 for the 10% bond processing fees collected by the circuit court clerk, clerk e-citation fees and bonds refunded.

### **Specific Data Limitations by Category**

**Note on Circuit Clerk Fees:** All 95 counties that provided data were able to provide the amounts collected by circuit court clerks as bond processing fees (also known as bail bond costs). However, this category of information is missing in some years within some counties. The bond processing fees collected by circuit court clerks were unavailable in 2016 through 2018 in Tazewell County and Vermilion County, but were available for 2019 and 2020. In Kane County, the clerk's bond processing fees were unavailable for 2016, but were provided for 2017 through 2020.

In addition to bond processing fees collected by circuit court clerks, the analysis also collected information about bond payments disbursed to circuit court clerks to satisfy other clerks' fees.

These bond amounts applied to other clerks' fees were not provided by five counties: McLean, Peoria, St. Clair, Tazewell and Will.

**Note on Bonds Applied to Satisfy Fines and Fees:** Almost all 95 counties were able to provide bond amounts applied to fees/assessments and fines as two separate categories. Two counties, St. Clair and Tazewell, did not provide these categories separately and instead provided a total amount applied to both fines and fees. For purposes of data aggregation, these figures in these two counties were included in the "applied to fees and assessments" category.

**Note on Total Bond Payments Collected:** While not central to the analysis, total bond amounts posted in all criminal cases was one of the data categories requested from each county. These total bond payments were provided by 92 of the 95 counties that provided data. Three counties did not provide total bond payments collected: Winnebago, Kane and Lake. Tazewell County provided total bond payments collected for 2019 and 2020 but not for 2016-2018. Bond payments collected are shown by county in the All Counties Table.

## SUMMARY OF FINDINGS

### Total Bond Payments Applied

The primary focus of this analysis is to identify the amount of total bond payments applied, which are payments processed and disbursed at the conclusion of a criminal case for a variety of purposes, including fines, fees, assessments, court costs, restitution, and refunds to the person who paid the bond. Bonds applied differ from total bond payments collected because of the timing between when a bond payment is posted for pretrial release and when the case is concluded. The purpose of the analysis is to understand how bond payments are distributed across various government purposes, including at the county level.

Over the five-year period from 2016 to 2020, total bond amounts applied, or disbursed, across the 95 Illinois counties that provided data for this analysis ranged from \$153.2 million in 2016 to \$121.9 million in 2020. Bonds disbursed in Cook County account for approximately 40% of the statewide total on average over this five-year period. Cook County's total bond payments applied over this period represent an annual average of \$58.1 million, compared to a total annual average of \$82.1 million across all 94 of the other counties combined.

The next table presents a summary of the distribution of total bonds applied across fees and assessments, fines, restitution, refunds and payments to attorneys.<sup>3</sup> Bonds applied to assessments and fees include bond processing fees collected by circuit court clerks. Bond payments refunded and payments to private attorneys applied directly from bonds are combined in the table because direct payments to attorneys were only available in five counties (DuPage, Kane, McLean, Will, St. Clair). The counties that could not provide this information indicated that payments to attorneys would be included in the bond payments refunded category.

Of the total bond payments applied shown in the table below, the majority—80%—were used to satisfy fees, fines and restitution payments, while the remaining 20% went toward refunds and payments to attorneys. However, when excluding Cook County from these totals, 65% of bonds applied were distributed to court-ordered fees and assessments, fines and restitution, and 35% was returned to the defendant, the person who posted the bond on behalf of the defendant or paid to private attorneys. The figures change significantly when excluding Cook County, likely due to incomplete data for refunded bond payments in Cook County.

Further analysis of each category as a percentage of total applied bonds in the table below found that, on average:

- 70% were applied to court ordered fees and assessments. This includes the bond processing fees collected by circuit court clerks that are discussed in more detail in the next section;
- 8% of the bond payments were applied to fines;
- 2% of bond payments were used to pay restitution to crime victims; and
- 20% of the bond payments were refunded to the defendant, the person who posted the bond on behalf of the defendant or were distributed as payments to private attorneys who represented the defendant.

<b>Distribution of Money Bond Payments in 95 Illinois Counties: 2016-2020</b>					
<b>Year</b>	<b>Applied to Assessments and Fees<sup>1</sup></b>	<b>Applied to Fines</b>	<b>Applied to Restitution<sup>2</sup></b>	<b>Refunded<sup>3</sup> or Paid to Private Attorneys<sup>4</sup></b>	<b>Total Bond Applied</b>
<b>2016</b>	\$111,399,564	\$11,034,123	\$3,349,628	\$27,425,253	<b>\$153,208,568</b>
<b>2017</b>	\$107,182,633	\$11,529,184	\$3,416,463	\$29,961,241	<b>\$152,089,521</b>
<b>2018</b>	\$87,649,978	\$11,550,700	\$2,939,957	\$29,044,311	<b>\$131,184,945</b>
<b>2019</b>	\$98,751,415	\$10,890,197	\$2,951,911	\$29,817,322	<b>\$142,410,845</b>
<b>2020</b>	\$84,072,586	\$9,139,517	\$2,255,839	\$26,477,598	<b>\$121,945,540</b>

Note: Data excludes Tazewell County for 2016-2018 and Kane County for 2016.

<sup>1</sup> Bond amounts applied to assessments and fees also include amounts applied to fines for two counties, St. Clair and Tazewell, because breakdowns between the two categories were not available for those two counties.

<sup>2</sup> Bond amounts applied to restitution were not available for four counties: Cook, Lake, St. Clair, Tazewell and Vermilion.

<sup>3</sup> Bond amounts refunded were not available for Cook County or Vermilion County.

<sup>4</sup> Amounts paid to private attorneys were only available for five counties: DuPage, Kane McLean, St. Clair and Will.

<sup>3</sup> Definitions of each data category can be found in the glossary of terms beginning on p. 16.

## **Circuit Court Clerk Bond Processing Fees**

Circuit court clerks in all counties outside of Cook County may retain 10% of bond payment amounts after all other court-ordered obligations have been met. This is referred to as “bail bond costs” in state statute (725 ILCS 5/110-7), and referred to as “bond processing fees” for purposes of this analysis. The Cook County Circuit Court Clerk is limited by state statute to retain up to \$100 from every cash bond payment posted for pretrial release. This policy change specific to Cook County went into effect on January 1, 2016. The revenue collected through these processing fees is then appropriated for use by the clerk of the circuit court or for other county functions. It is important to note that while bond processing fees are treated as clerks’ fee revenue, they are general revenue and may be spent on county expenditures other than the circuit clerks’ office.

These bond processing fees will be eliminated with the abolishment of cash bail when the SAFE-T Act takes effect on January 1, 2023. This section presents findings on the dollar amounts collected through these processing fees.

Total bond processing fees collected by the circuit court clerks in the 95 counties that provided data for this analysis are shown in the following chart. These 95 circuit clerks collected a total of \$14.9 million in bond processing fees in 2016, which decreased to \$4.8 million in 2020. Cook County contributed to a large portion of these figures in 2016 through 2018, accounting for \$4.8 million on average across the five-year period. In 94 counties excluding Cook County, circuit court clerks collected an average of \$6.8 million across the five-year period.

**Over the five-year period examined, bond processing fees represent 8% of total bonds applied.**

*Note: Due to the way bond processing fees were recorded in previous years in 77 of the 95 counties, figures for 2016, 2017, 2018 and half of 2019 are slightly inflated because they include some other fees applied to circuit clerks from bond payments in addition to the 10% bond processing fees. Within these 77 counties, the bond processing fee figures are estimated to be*

inflated by about 14% based on 2019 and 2020 data. However, when combined with the bond processing fees in the remaining 18 counties, the difference is reduced to less than 4%.

The only year for which we have precise data for the bond processing fees is 2020 due to changes in the way data were recorded following implementation of the Criminal and Traffic Assessment Act. However, it should also be noted that 2020 is not a representative year due to COVID-19. Court closures and case delays related to COVID-19 likely resulted in lower dollar amounts collected than previous years.

**Total Fees Disbursed from Bond Payments to Circuit Court Clerks:** In addition to bond processing fees, circuit clerks also receive disbursements from bond payments that are used to satisfy other fees including clerks’ special purpose funds (operations and administration, court automation, e-citation and document storage). The SAFE-T Act does not eliminate any fees or fines other than bond processing fees. Of the 95 counties that provided data for this analysis, 90 provided data detailed enough to examine bond processing fees compared to total fees applied to circuit clerks from bond payments.<sup>4</sup> These figures are shown in the chart below. Among 90 counties, our analysis found that:

- Circuit court clerks received an annual combined average of \$9.7 million in total bond disbursements over the five-year period from 2016 to 2020, including bond processing fees and other fees disbursed to circuit clerks;<sup>5</sup>
- Bond processing fees totaled \$5.6 million on average annually, and all other circuit clerk fees applied from bond payments totaled \$4 million on average annually, over the five-year period; and
- Bond processing fees represented 58.2% of the total bond allocations to circuit clerks on average over the five-year period.

\*Excludes 5 counties: McLean, Peoria, St. Clair, Tazewell and Will.

<sup>4</sup> The 90 counties included in this portion of the analysis exclude the following 5 counties: McLean, Peoria, St. Clair, Tazewell and Will.

<sup>5</sup> Other fees distributed to circuit clerks commonly include operation and administrative, document storage, e-citation, court automation, and other general clerk’s fees.

## **Bonds Distributed to Circuit Court Clerks Compared to Clerks' Annual Revenue**

With the elimination of cash bond, circuit court clerks will no longer receive bond processing fees. Bond processing fees are typically considered fee revenue within each circuit court clerk office's budget, but are deposited in the county's general fund and may be used for other county-wide purposes if those funds are not spent by the office of the circuit court clerk. In order to demonstrate the magnitude of "lost revenue" from bond processing fees in relation to clerks' overall revenue, this section of the report presents the amount of money bond processing fees generate for circuit clerks compared to clerks' fee revenue.

The bond fee amounts are not directly comparable to revenue data because they come from different sources: bond data is from case management systems and annual revenue data came from audited financial reports submitted to the Administrative Office of the Illinois Courts and reported in the Illinois Courts Annual Report (Statistical Summary) for each fiscal year. In most cases, these two sets of data also represent different time frames: bond data in this report is based on the calendar year whereas revenue data is based on each county's fiscal year. However, we are presenting a side-by-side comparison to provide context for how much bond fees applied to circuit court clerks represent within the clerks' total budgets.

**Bond processing fees compared to clerks' general fee revenue:** Clerks' fee revenue is general operating revenue and excludes the clerks' special purpose funds and other sources. Bond processing fees are reported within a general fee revenue category called "Fees and Costs" in annual financial reports submitted to the Administrative Office of the Illinois Courts.<sup>6</sup>

The following chart presents bond processing fees collected by circuit court clerks compared to circuit court clerks' total general fund fee revenue in 89 counties.<sup>7</sup> Bond processing fees collected by circuit court clerks represent 11% of clerks' fee revenue an average over the five-year period from 2016 through 2020.

---

<sup>6</sup> Revenues for the circuit court clerk of each county are reported in the Illinois Courts' annual statistical summaries, which can be found at <https://www.illinoiscourts.gov/reports/annual-report-illinois-courts>.

<sup>7</sup> Six counties are excluded from this portion of the analysis. Five are excluded due to the timing of their fiscal years, which differ significantly from the calendar year: Calhoun, Macoupin, Morgan, Shelby and Winnebago. Sangamon County is also excluded due to very low clerk fee bond amounts that could potentially skew the data.

*Note on differences in timing of revenue data:* The clerks' revenue data presented here is based on each county's fiscal year, whereas the bond data presented in our findings is for the calendar year. The majority of counties' fiscal years end on November 30 and seven have fiscal years that end on December 31. While the fiscal years ending on November 30 are not the same as the calendar year, they are included in the analysis due to the small timing difference of only one month. Five counties whose fiscal years end on different dates (Calhoun, Macoupin, Morgan and Shelby Counties' fiscal years end on August 31 and Winnebago County's fiscal year ends on September 30) are excluded from this revenue portion of the analysis because their fiscal years differ so widely from the calendar year, such that the data is not directly comparable.

\*Excludes 6 counties: Calhoun, Macoupin, Morgan, Sangamon, Shelby and Winnebago.

Further analysis found differentiation in bond processing fees in proportion to clerks' fee revenue based on county size. In general, bond processing fees represent a larger portion of clerks' fee revenue in small counties than in larger counties. These differences in dollar amounts by county size are shown in the following table, which presents the sum total of circuit court clerks' bond processing fees compared to clerks' fee revenue across the five-year period from 2016 through 2020.

<b>Bond Processing Fees Compared to Clerks' Fee Revenue (General Fund)</b>		
	<b>Sum of Bond Processing Fees: 2016-2020</b>	<b>Sum of Clerks' General Fee Revenue: 2016-2020</b>
Small Counties (Pop. Under 50,000)	\$8,070,493	\$38,191,305
Medium Counties (Pop. 50,000-200,000)	\$7,986,702	\$57,970,359
Large Counties (Pop. Over 200,000)	\$38,943,154	\$411,165,331

**Total allocations to circuit court clerks from applied bond payments compared to clerks' total revenue in all funds:** In addition to bond processing fees, other fees are often applied from bond payments directly to circuit court clerks. These fees include other general clerk fees and special purpose fees that support the clerks' special purpose funds (most commonly operation and administrative, court automation, document storage, e-citation funds). To understand how total bond allocations to circuit clerks compare to circuit clerks' total annual revenue from all funds<sup>8</sup>, these two figures are presented in the following chart across 84

<sup>8</sup> Total revenue includes the following fee and revenue categories as reported in the AOIC's annual statistical reports: Clerk's Fees and Costs; Court Automation Fund; Document Storage Fund; Operation and Administrative Fund; Clerk's E-Citation Fund; Maintenance and Child Support; Interest on Invested Funds; DHFS IV-D Contractual and Incentive; and Other Revenue.

counties.<sup>9</sup> These total bond allocations to circuit clerks include bond processing fees as well as other clerks' fees including special purpose fund fees.

\*Excludes 11 counties: Calhoun, Macoupin, McLean, Morgan, Peoria, Sangamon, Shelby, St. Clair, Will and Winnebago.

The following table shows the sum total of circuit court clerks' allocations from bond payments compared to clerks' total revenue from all sources across the five-year period from 2016 through 2020, grouped by county size. Again, there are differentiations between large and small counties in all clerks' fees allocated from bond payments in proportion to total annual revenue from all sources. In small counties, total fees applied to circuit clerks from bond payments represent a larger portion of clerks' total revenue than in large counties.

**Total Bond Allocations to Clerks Compared to Total Revenue  
(All Funds)**

	<b>Sum of Clerks' Total Bond Allocations: 2016-2020</b>	<b>Sum of Clerks' Total Revenue: 2016-2020</b>
Small Counties (Pop. Under 50,000)	\$10,129,111	\$69,760,808
Medium Counties (Pop. 50,000-200,000)	\$10,972,422	\$67,531,289
Large Counties (Pop. Over 200,000)	\$46,121,066	\$570,109,162

<sup>9</sup> Eleven counties are excluded from this portion of the analysis. Five are excluded due to the timing of their fiscal years, which differ significantly from the calendar year: Calhoun, Macoupin, Morgan, Shelby and Winnebago. Sangamon County is excluded due to very low clerk fee bond amounts that could potentially skew the data. An additional five counties are excluded because detailed information about other clerk fee allocations from bond payments outside of bond processing fees were not available for those counties: McLean, Peoria, St. Clair, Tazewell and Will.

## **Bonds Applied to County-Specific Fees and Assessments**

As highlighted earlier in the findings, a significant portion of bond payments (70%) are applied to fees and assessments. These fees support a variety of government functions at the state, county and municipal level.

This section of the analysis examines the portion of bond payments applied to court-ordered fees and assessments specific to county-level operations. We received data allowing for this level of detailed analysis from 88 of the 95 total counties that provided data.<sup>10</sup> For purposes of this analysis, county-level fees include only fees that are retained solely by the county, and not fees from which the county receives a portion with another portion distributed to other state or local agencies.<sup>11</sup> There are a variety of fees directed to support county operations, including county general funds, state’s attorneys, public defenders, probation and pretrial departments, electronic monitoring, sheriffs and other specific county functions (these vary widely by county). With the exception of bond processing fees, existing fees are not impacted by the SAFE-T Act. However, cash bonds will no longer be paid at the time of pretrial release and therefore will no longer be used to satisfy the payment of court-ordered fees.

The following figures present the amount of bonds distributed to satisfy fees at the county level compared to bonds applied to all fees and assessments within the 88 counties for which these data were available. Of total assessments and fees applied from bonds, an average of 58% of bond payments were distributed to county-specific fees between 2016 and 2020. The remaining 42% of bonds applied to fees were directed to other state or municipal fees imposed on the defendant.

**Bonds Applied to County-Level Fees  
n = 88 Counties\***

**Bonds Applied to County-Level Fees as a Percentage of Bonds Applied to All Fees  
n = 88 Counties\***

\*Excludes 7 counties: Cook, DuPage, McLean, Peoria, St. Clair, Tazewell and Will.

\*Excludes 7 counties: Cook, DuPage, McLean, Peoria, St. Clair, Tazewell and Will.

<sup>10</sup> The 88 counties included in this portion of the analysis exclude Cook, DuPage, McLean, Peoria, St. Clair, Tazewell and Will Counties because this level of detail regarding county-level assessments and fees applied from bond payments was not available.

<sup>11</sup> Some fee and assessment categories are collected and distributed to multiple agencies, including a portion to counties. For purposes of this analysis, the county-specific fees exclude these fees that are distributed to multiple entities and only include funds that are directed solely for county-level purposes. Specific examples of county-level fees are provided in the data definitions section on p. 16.

## DATA CATEGORY DEFINITIONS

**Total Bond Collected** – The total amount of bond payments collected by the circuit court clerk. In this analysis, total bond collected includes bond payments in all criminal cases including felonies, misdemeanors and DUIs (driving under the influence). After these amounts are collected, they are held until the closure of the criminal case.

**Total Bonds Applied** – The total amount of bond payments processed and disbursed in any given year. Total bond applied differs from the total bond amount collected, and the year in which the bond payment was collected may differ from the year the bond was disbursed due to the timing of each court case. Bonds are applied, or processed, at the conclusion of a criminal case. This analysis focuses primarily on the bond amounts applied rather than bond amounts collected. This category represents total bond payments applied toward all purposes including fines, fees, assessments, court costs, restitution, and amounts refunded back to the person who paid the bond.

**Bond Processing Fee Retained by Circuit Court Clerk** – Circuit clerks are authorized by law to maintain up to 10% of each bond payment as a processing fee. The only exception is Cook County, which is only authorized to retain \$100 from each bond payment. This category reflects these amounts retained as processing fees.

**Total Bond Amounts Applied to Circuit Court Clerk** – The total amount of applied bond payments that are assessed by the court to the circuit clerk. This total includes bond processing fees, other general clerks' fees and amounts applied to the clerks' special purpose funds: Court Automation, Document Storage, Operation and Administrative and E-Citation Funds.

**Bonds Applied to Other County Assessments** – In addition to circuit court clerks, several other county-level entities receive distributions of fees and assessments applied from bond payments. Bonds are often applied for purposes of funding court services operations including the sheriff, probation department, state's attorney, public defender, specialty courts and other county-specific purposes such as child advocacy programs and children's waiting rooms at courthouses. This category was separated out from Total Bonds Applied to Circuit Court Clerk and Total Fees and Assessments categories when possible in order to provide additional information about the fiscal impact to counties overall. We were able to calculate the amount of bonds applied toward county-specific assessments and fees for 88 counties that provided detailed data.<sup>12</sup> Examples of county-specific fee classifications include (but are not limited to) the following:

County Fee, County General Fund, States Attorney, States Attorney Automation, Sheriff, Law Library, Court, Court Services, Judicial Security, Public Defender, Public Defender Automation, Probation, Probation Operations Fee, Lab Analysis, Medical Costs, Youth Diversion, Drug Court, Mental Health Court, Jury Demand, Transfer Fee, Victim Impact Panel, Waiting Room Fee, Work Release, Percent County, Child Advocacy Center, Electronic Monitoring Probation Fee, Probation Court Monitoring.

---

<sup>12</sup> This includes the 77 counties whose data were provided by Goodin Associates (PC JIMS) and the following 11 counties: Champaign, DeKalb, Kane, Kendall, Lake, LaSalle, Madison, McHenry, Sangamon, Vermilion and Winnebago.

**Bonds Applied to All Other Assessments** – The combined total of all other fees, costs and assessments distributed across all other local and state purposes (excluding county-only funding that is captured in the previous classification, “Bonds Applied to Other County Assessments”). This category in some cases includes fees and assessments that are collected and distributed to multiple entities, including a portion to counties.

**Total Assessments and Fees** – This includes all assessments and fees applied toward all purposes combined. This category represents the sum total of:

- Total Bond Amounts Applied to Circuit Court Clerk (including Bond Processing Fees);
- Bonds Applied to Other County Assessments; and
- Bonds Applied to All Other Assessments.

For counties where breakdowns of assessments for county-specific purposes were not available, this Total Assessments and Fees category captures all assessments regardless of the entity they are distributed to. Assessments and fees differ from fines in that they are intended to offset a portion of the cost of operating the courts rather than serving as part of a criminal defendant’s punishment.

**Bonds Applied to Fines** – Total bond amounts applied to statutory fines as part of punishment in a criminal defendant’s conviction and sentencing. Fines are predetermined penalties paid to the court and are not waivable.

**Bonds Applied to Restitution** – Total bond amounts applied toward restitution ordered by the court as part of the defendant’s punishment. Restitution is intended to compensate a victim for losses related to a crime.

**Bonds Refunded** – Amount repaid to the individual or entity that paid the bond amount required for pretrial release.

**Bonds Distributed to Attorneys** – Amount distributed to private attorneys from bond payments. A private attorney who represents a criminal defendant may file a request with the court to receive payment through a bond assessment, which the judge can order to be deducted directly from the bond payment. We received data in this category for just five counties— DuPage, Kane, McLean, St. Clair and Will. Some counties indicated they do not have a way to separate out these amounts from amounts refunded, so in most cases payments to attorneys would be reflected in the “Refunded” category.

## ALL COUNTIES TABLE

Detailed figures for each county are presented in the table beginning on the next page.

County:	Population	Total Bond	Total Bond	Circuit Clerk	Total Bond	Bonds	Bonds	Total	Bonds	Bonds	Bonds
